We add this to the other 1 in characters.get character 0 + 1 andget2 as result Theget set pattern provides a structure that allows logic to be added during the setting set or retrieval get of a property instance of an instantiated class which can be useful when some instantiation logic is required for the property Ultimately it probably doesn t have a safe .getmethod because a dict is an associative collection values are associated with names where it is inefficient to check if a key is present and return its value without throwing an exception while it is super trivial to avoid exceptions accessing list elements as the len method is very fast

Am I correct in assuming those three cases? If so wha So I ve come up with a simpler script that returns all theGETparameters in a single object

You should call it just once assign the result to a variable and then at any point in the future getany value you want from that variable using the appropriate key How toget GET variables from request in JavaScript?
