Here thegetmethod finds a key entry for e and finds its value which is 1

We add this to the other 1 in characters.get character 0 + 1 andget2 as result  
Theget set pattern provides a structure that allows logic to be added during the  
setting set or retrieval get of a property instance of an instantiated class  
which can be useful when some instantiation logic is required for the property  
Ultimatelyitprobably doesn t have a safe .getmethod because a dict is an  
associative collection values are associated with names whereitis inefficient to  
check if a key is present and return its value without throwing an exception  
whileitis super trivial to avoid exceptions accessing list elements as the len  
method is very fast

The .getmethod allows you to query the value ajax jquery simplegetrequest Asked

request.GETis the dictionary of theGETvariables in the http request made to your  
server for example Feb 5 2009 Isitpossible to pass parameters with an  
HTTPgetrequest? If so how should I then doit? I have found an HTTP post request  
link

In that example the string postData is sent to a webserver

I wo How toget GET variables from request in JavaScript? Does jQuery or YUI!  
have this feature built in? Sep 6 2008 From what I can gather there are three  
categories Never useGETand use POST Never use POST and useGET Itdoesn t matter  
which one you use

Am I correct in assuming those three cases? If so wha So I ve come up with a  
simpler script that returns all theGETparameters in a single object

You should callitjust once assign the result to a variable and then at any point  
in the future getany value you want from that variable using the appropriate key  
Jun 11 2009 I m developing a new RESTful webservice for our application

When doing aGETon certain entities clients can request the contents of the  
entity. If they want to add some parameters for example s.
