Here thegetmethod finds a key entry for e and finds its value which is 1

We add this to the other 1 in characters.get character 0 + 1 andget2 as result
Theget set pattern provides a structure that allows logic to be added during the
setting set or retrieval get of a property instance of an instantiated class
which can be useful when some instantiation logic is required for the property
Ultimately it probably doesn't have a safe .getmethod because a dict is an
associative collection values are associated with names where it is inefficient
to check if a key is present and return its value without throwing an exception
while it is super trivial to avoid exceptions accessing list elements as the len
method is very fast
