Here the `get` method finds a key entry for `e` and finds its value which is 1

We add this to the other 1 in `characters.get character 0 + 1` and `get2` as result  
The `get set` pattern provides a structure that allows logic to be added during the setting set or retrieval get of a property instance of an instantiated class which can be useful when some instantiation logic is required for the property  
Ultimately it probably doesn't have a safe `.get` method because a dict is an associative collection values are associated with names where it is inefficient to check if a key is present and return its value without throwing an exception while it is super trivial to avoid exceptions accessing list elements as the `len` method is very fast

The `.get` method allows you to query the value ajax jquery simple get request Asked 13 years 10 months ago Modified 6 years 4 months ago Viewed 264k times Feb 5 2009 Is it possible to pass parameters with an HTTP get request? If so how should I then do it? I have found an HTTP post request link

In that example the string `postData` is sent to a webserver

I want to get GET variables from request in JavaScript? Does jQuery or YUI! have this feature built in? Aug 14 2012 However if when your data structure gets more complex http GET and without JSON your programming and ability to recognise the data gets very difficult

Therefore unless you could keep your data structure simple I urge you adopt a data transfer framework

If your requests are browser based the industry usual practice is JSON Sep 6 2008 From what I can gather there are three categories Never use GET and use POST Never use POST and use GET It doesn't matter which one you use

Am I correct in assuming those three cases? If so what PowerShell `sGet ADGroupMember` cmdlet returns members of a specific group. Is there a cmdlet or property to get all the groups that a particular user is a member of? Jun 11 2009 I'm developing a new RESTful webservice for our application

When doing a GET on certain entities clients can request the contents of the entity. If they want to add some parameters for example s.
