#girls in the hole# Expected number of ratio of girls vs boys birth Cross Validated Hypothesis testing Fisher s exact.

Apr 15 2014 Expectedgirlsfrom one couple$ {}=0.5\cdot1 + 0.25\cdot1 =0.75$ Expected boys from one couple$ {}=0.25\cdot1 + 0.25\cdot2 =0.75$ 1 As I said this works for any reasonable rule that could existin thereal world

An unreasonable rule would be oneinwhichtheexpected children per couple was infinite Feb 9 2022 Consideringthepopulation ofgirlswith tastes disorders I do a binomial test with number of success k = 7 number of trials n = 8 and probability of success p = 0.5 to test my null hypothesis H0 = my cake tastes good for no more than 50% ofthepopulation ofgirlswith taste disorders .Inpython I can run binomtest 7 8 0.5 alternative= greater which givesthefollowing result Jul 4 2023 1st 2nd boy girl boy seen boy boy boy seen girl boyThenet effect is that even if I don t know which one is definitely a boy theother child can only be a girl or a boy and that is always and only a 1 2 probability ignoring any biological weighting thatgirlsmay represent 51% of births or whateverthereality is Aug 18 2017 Probability of having 2girlsand probability of having at least one girl Ask Question Asked 8 years 4 months ago Modified 8 years 4 months ago Jan 10 2024 Use standard type for Greek letters subscripts and superscripts that function as identifiers i.e

are not variables asin thesubscript girlsin theexample that follows and abbreviations that are not variables e.g. log GLM WLS. Use bold type for symbols for vectors and matrices. Use italic type for all other statistical symbols Apr 1 2018 Source Harvard Statistics 110 see 17 p

29 of pdf. A couple decides to keep having children until they have at least one boy and at least one girl and then stop

Assume they never have twi Mar 2 2017 A probability problem Inhow many different ways can 5 people sit around a round table? Isthesymmetry ofthetable important? Answer Ifthesymmetry ofthetable is not taken into accountthe May 16 2021 When you use a paired T test you are essentially doing a one sample test where your one sample consists ofthepaired differences between outcomesintwo groups

If you create a new sample of these difference values and then applytheformula for a one sample T test you will see that this is equivalent tothepaired test Echoingthefirst answer. Don t bother to convert just modelthecounts and covariates directly

If you do that and fit a Binomial or equivalently logistic regression model totheboy girl counts you will if you choosetheusual link function for such models implicitly already be fitting a covariate smoothed logged ratio of boys togirls

That sthelinear predictor.Theprimary reason Aug 5 2023 A couple decides to keep having children until they havethesame number of boys andgirls and then stop
