Apr 15 2014 Expectedgirlsfrom one couple\$ {}=0.5\cdot1 + 0.25\cdot1 =0.75\$  
Expected boys from one couple\$ {}=0.25\cdot1 + 0.25\cdot2 =0.75\$ 1 As I said  
this works for any reasonable rulethatcould exist in the real world

An unreasonable rule would be one in which the expected children per couple was  
infinite Feb 9 2022 Considering the population ofgirlswith tastes disorders I do  
a binomial test with number of success  $k = 7$  number of trials  $n = 8$  and  
probability of success  $p = 0.5$  to test my null hypothesis  $H_0 =$  my cake tastes  
good for no more than 50% of the population ofgirlswith taste disorders

In python I can run `binomtest 7 8 0.5 alternative= greater` which gives the  
following result Aug 18 2017 Probability of having 2girlsand probability of  
having at least one girl Ask Question Asked 8 years 4 months ago Modified 8  
years 4 months ago Jul 4 2023 1st 2nd boy girl boy seen boy boy boy seen girl  
boy The net effect is thateven if I don t know which one is definitely a boy the  
other child can only be a girl or a boy andthat is always and only a 1 2  
probability ignoring any biological weightingthat girls may represent 51% of  
births or whatever the reality is Jan 10 2024 Use standard type for Greek  
letters subscripts and superscriptsthatfunction as identifiers i.e

are not variables as in the subscript girls in the examplethatfollows and  
abbreviations that are not variables e.g. log GLM WLS. Use bold type for symbols  
for vectors and matrices. Use italic type for all other statistical symbols Apr  
1 2018 Source Harvard Statistics 110 see 17 p

29 of pdf. A couple decidestokeep having children until they have at least one  
boy and at least one girl and then stop

Assume they never have twi Mar 2 2017 A probability problem In how many  
different ways can 5 people sit around a round table? Is the symmetry of the  
table important? Answer If the symmetry of the table is not taken into account  
the May 16 2021 When you use a paired T test you are essentially doing a one  
sample test where your one sample consists of the paired differences between  
outcomes in two groups

If you create a new sample of these difference values and then apply the formula  
for a one sample T test you will seethatthis is equivalenttothe paired test  
Echoing the first answer. Don t bothertoconvert just model the counts and  
covariates directly

If you dothatand fit a Binomial or equivalently logistic regression modeltothe  
boy girl counts you will if you choose the usual link function for such models  
implicitly already be fitting a covariate smoothed logged ratio of boysto  
girls. That s the linear predictor
