

<how to strip like a pro> string strip vs lstrip vs rstrip in Python Stack String.strip in Python Stack Overflow python What. Rating: 5 (8.666.465 reviews) - Free • How • Access

Original URL: <https://tools.orientwatchusa.com/how-to-strip-like-a-pro.pdf>

lstrip rstrip and strip remove characters from the left right and both ends of a string respectively. By default they remove whitespace characters space tabs linebreaks etc. Without strip bananas is present in the dictionary but with an empty string as value

With strip this code will throw an exception because it strips the tab of the banana line Dec 9 2012 I was told it deletes whitespace but s = ss asdas vsadsafas asfasasgas print s.strip prints out ss asdas vsadsafas asfasasgas shouldn't it be ssasdasvsadsafasfasasgas? 3 Just to add a few examples to Jim's answer according to strip docs Return a copy of the string with the leading and trailing characters removed

The chars argument is a string specifying the set of characters to be removed

If omitted or None the chars argument defaults to removing whitespace. The String.strip String.stripLeading and String.stripTrailing methods trim whitespace [as determined by Character.isWhiteSpace] off either the front back or both front and back of the targeted String Oct 8 2015 3 Pointers strip returns a new string so you need to assign that to something

better yet just use a list comprehension. Iterating over a file object gives you lines not words so instead you can read the whole thing then split on spaces

The with statement saves you from having to call close manually Oct 1 2016 I want to eliminate all the whitespace from a string on both ends and in between words

I have this Python code def my\_handle self sentence = hello apple sentence.strip But that Aug 29 2012 list = map str.strip list This will apply the function str.strip to every element in list return a new list and store the result back in list Feb 19 2012 37 The strip method removes whitespace by default so there is no need to call it with parameters like \t or \n

However strings in Python are immutable and can't be modified i.e. the line.strip call will not change the line object

The result is a new string which is returned by the call Jun 17 2014 But when using strip strip unneeded it changed the size from 400+ mb to 55 mb which is still considerable yet allowed the library to be accessed from other shared libraries. In short I'd trust strip

Maybe your application cannot be reduced any further without code changes.
