HTTP is the foundation of data communication for the World Wide Web where hypertext documents include hyperlinks to other resources that the user can easily access for example by a mouse click or by tapping the screen in a web browser. HTTP is a request-response protocol in the client-server model. Dec 22 2025 HTTP is an application layer protocol for transmitting hypermedia documents such as HTML.

It was designed for communication between web browsers and web servers but it can also be used for other purposes such as machine to machine communication, programmatic access to APIs and more. Nov 21 2025 HTTP standard application level protocol used for exchanging files on the World Wide Web.

Web browsers are HTTP clients that send file requests to Web servers which in turn handle the requests via an HTTP service. HTTP was originally proposed in 1989 by Tim Berners Lee. Despite the XML and HTTP in the name, XHR is used with other protocols than HTTP and the data can be of many different types like HTML, CSS, XML, JSON and plain text. Hypertext Transfer Protocol (HTTP) is the foundation of the World Wide Web and is used to load web pages using hypertext links.

Learn more about HTTP. Learn everything about HTTP protocol. Feb 3 2025 HTTP Hypertext Transfer Protocol is a set of rules that govern how information will be transferred between networked devices specifically web servers and client browsers. Hypertext Transfer Protocol Secure (HTTPS) is an extension of the Hypertext Transfer Protocol (HTTP).

It uses encryption for secure communication over a computer network and is widely used on the Internet. [1][2] In HTTPS, the communication protocol is encrypted using Transport Layer Security (TLS) or formerly Secure Sockets Layer (SSL).

The protocol is therefore also referred to as HTTP. Hypertext Transfer Protocol (HTTP) is a communications protocol. It is used to send and receive webpages and files on the internet.

It was developed by Tim Berners Lee and is now coordinated by the W3C. HTTP 1.1 is the most used version today and RFC 2616 completely explains how it should work. HTTP is a protocol for fetching resources such as HTML documents.

It is the foundation of any data exchange on the Web and it is a client-server protocol which means requests are initiated by the recipient usually the Web browser.
