Adhesive capsulitis is characterised by gradual increase in stiffness and pain.

This self limiting disorder has three stages with the mean duration of 30 months for untreated cases with some subsequent restricting of movement of theshoulder1  
3 4

The incidence offrozenshoulderis only <2% Sep 4 2025 Whilefrozenshoulderonly affects about two to five percent of the population it can take years to heal

Heres what you need to know about this condition Mar 1 2008 The aims of this study are to describe the medium andlong termoutcome of primaryfrozen shoulderusing a validated patient based questionnaire in a large clinic based population of patients and to identify any prognostic factors Jan 30 2024

Frozenshoulder also called adhesive capsulitis is a condition involving pain and stiffness in yourshoulderjoint

Symptoms usually start slowly and get worse over time. But within one to three years symptoms typically get better

Your risk for developingfrozenshoulderincreases if you must keep yourshoulderstill for alongtime If left untreated frozenshouldercan lead to prolonged pain severe stiffness andlong termmobility restrictions making everyday activities such as dressing lifting or reaching overhead difficult

Over time untreatedfrozenshouldermay cause permanent joint tightness and muscle weakness significantly impacting quality of life Aug 19 2022 Frozen shoulder also called adhesive capsulitis involves stiffness and pain in theshoulderjoint. Signs and symptoms typically begin slowly then get worse

Over time symptoms get better usually within 1 to 3 years. Having to keep ashoulderstill for alongperiod increases the risk of developingfrozen shoulder

This might happen after having surgery or breaking an arm Frozenshouldercan lead to long termcomplications such as Chronic pain While pain may decrease over time some individuals experience persistent discomfort

Limited range of motion Without proper treatment theshoulders mobility may remain limited even after the initial pain subsides May 24 2023 Frozen shoulder adhesive capsulitis is when the protective capsule around theshoulderjoint contracts causing pain and restricting movement.
