Apr 2 2025 In terms of pure stock count VEQT may appear more diversified

But when we adjust for concentration and look at the effective number of stocks XEQT comes out ahead Mar 31 2025 When we apply this analysis to our two ETFs we find the following VEQT has an effective number of stocks of about 180. XEQT has an effective number of stocks of about 198

This shows that XEQT is slightly more diversified than VEQT even though VEQT holds more individual stocks Feb 28 2025 XEQT provides slightly higher U.S

equity exposure and a lower MER while VEQT offers more balanced global diversification and a higher allocation to Canadian equities Aug 7 2024

There are a few minor variations between XEQT and VEQT which we'll cover next. If any of these differences tilt your scale go for it

Otherwise a coin flip may be fine. First there are the annual fees. XEQT has a slightly lower management expense ratio or MER compared with VEQT Dec 18 2025 If you're concerned about currency risk and want broader global diversification VEQT might be the better choice

This approach can potentially reduce volatility especially during economic downturns when currency fluctuations can have a significant impact on returns Dec 20 2024 While XEQT has a slight advantage in fees and U.S. exposure VEQT offers broader diversification and a larger fund size

Ultimately the best choice depends on your financial goals, risk tolerance and personal preferences May 23 2024 VEQT is an all stock ETF and an aggressive portfolio. Aggressive in this case refers to the risk profile of the portfolio

It is more sensitive to market fluctuations than a growth or balanced portfolio Feb 8 2025 With this RESP all-in-one ETF strategy from 0-10 years we'd hold around 80% in equities and 20% in bonds. I decided to do a mix of XGRO and XBAL so we'd hold around 26% in bonds when the kids are between 10 and 15 years old

Then when they are older than 15 we'd hold XBAL only and have about 40% exposure to bonds Aug 22 2024 XEQT and VEQT are solid options for investors seeking diversified equity exposure across geographies with slight differences in cross market allocations Nov 13 2025 While diversification may help smooth a portfolio's fluctuations it does not eliminate risk

In other words diversification may not protect you from a loss when markets are falling.
