When you own a piece of Immersion, you're touching technology literally

Since 1993 we've delivered innovations that blur and break the boundary between the digital world and reality. By Chris Ulrich, CTO at Immersion. Over the last few months I introduced the haptic stack as a conceptual framework that we use at Immersion to think about the key technology components of an engaging haptic experience. Immersion delivers high fidelity haptics with the ability to create distinctive textures, true-to-feel pushes and realistic clicks for every surface, button, slider and dial in the car. We're driven to help our customers harness the transformational power of touch to innovate new experiences and business models.

We embrace challenges, take risks and collaborate every step of the way.

We're Immersion and we're always looking for great people and ideas. Nov 10, 2020
Chris Ulrich, Immersion's CTO, talks about the wide range of haptic experiences in a previous article and provides examples of new haptic technologies that can expand the public's perception beyond even the PS5 controller.
