Mar 2 2010 In Python what exactly doesimport*import? Does itimport__init__.py found in the containing folder? For example is it necessary to declare from project.modelimport__init__ or is from proj Feb 25 2012 271 Many people have already explained aboutimportvs from so I want to try to explain a bit more under the hood where the actual difference lies

First of all let me explain exactly what the basicimportstatements do.importX Imports the module X and creates a reference to that module in the current namespace Nov 3 2020 import{ BrowserRouter as Router Route Switch } from react router dom What is the relationship between Router Route Switch and BrowserRouter? Is this a form of destructuring? If so I thought destructuring was done using the following syntax Importaliases are where you take your standardimport but instead of using a pre defined name by the exporting module you use a name that is defined in the importing module How do Iimportfiles in Python? I want toimport a file e.g

file.py a folder a file dynamically at runtime based on user input one specific part of a file e.g. a single function Oct 28 2014 I ve tried to find a comprehensive guide on whether it is best to useimportmodule or from moduleimport

I ve just started with Python and I m trying to start off with best practices in mind. Bas Dec 16 2024 This question is similar to Can timportmoviepy.editor

If you believe its different please edit the question make it clear how its different and or how the answers on that question are not helpful for your problem Jul 7 2009 The from [module]import[identifiers] form is more future proof because you can easily see when oneimportwill be overriding another

Also note that variables aren t different from functions in Python in terms of how they re addressed every identifier like name or sayBye is pointing at some kind of object Jun 28 2009 I want to inherit from a class in a file that lies in a directory above the current one

Is it possible to relativelyimportthat file? In my case I refactored a single python script into different modules leaving some old .py and .pyc files around and stumbled on the cannotimportname error.
