Discover how to log in to the admin panel of your new Virgin Media Arris Hub 4 router and resolve any setup issues All HUBs are dual band but the default settings have both bands configured with the same SSID. Just log in and rename each band if you wish to do so

The router url is 192.168.0.1 and the username and password are printed on the router label

Beware of using the Connect phone app it will prompt you to recombine the SSIDs and also turn on the guest network Hi I am currently attempting to access my admin page on 192.168.0.1 I have restarted the router with the pin and tried the password on the bottom not the WiFi password the one directly under the afformentioned ip reference

As well to counter misspelling I have also had two others try on my network with the same details from the box to no avail. I have tried this on both LAN and WiFi I am unable to access my Hub 4 admin pages using 192.168.0.1 Wifi is working ok

I have reset the Hub and can get to the password change screen successfully 5486311 May 16 2023 Firmware version v1.0.4.122 Router Model R6700v3 Everytime I try to get to get into my router via 192.168.1.1 I am redirected to routerlogin

How do I get back to getting into my router via 192.168.1.1? Or how do I get into my router from routerlogin? Or can I undo https just for 192.168.1.1 so that I can get back to using it? Feb 9 2019 On my current windows 10 october 2018 update [version 1809 17763.292] with current chrome 72.0.3626.92 install if i try and access my netgear c6300 cable May 23 2016 I am unable to login to my router using the IP address http 192.168.1.1

I get a site cannot be reached response from my browser Apr 17 2020 The default IP for some of these Extenders is indeed 192.168.1.250 24 to be correct. The default subnet mask is 255.255.255.0 so very similar to many home networks

The only challenge instead of reconfiguring everything in this case would be to find the other device using the same address reserve a different MAC address for the other device device Hi Quevelda Thank you for your post. Sorry to hear you can t seem to access your Hub settings page

We would need to arrange for an engineer to visit to replace the Hub and they will be able to check everything is working correctly for you before leaving. We d also likely be able to get an engineer out to you sooner than the Hub would be delivered

Don t worry you wouldn t be charged for a Connect to Hub 5 at http 192.168.0.1
