3 days ago Setupwith Pythonbuilt from source When youbuildCPython from source debugging information should be available and thebuildshould add a python gdb.py file to the root directory of your repository

To activatesupport you must add the directory containingpython gdb.py toGDBs auto load safe path In this packagepythoncode breakpoints are supported by utilizing a python c extension breakpoint mark function which is accessible from theGDBconsole

This method requires thatpythoncode breakpoints are set explicitly in thepythoncode Feb 7 2018 I m trying to buildthe latestgdb10.1 from source

[My reason for wanting to do it is that I m trying to debug a program that links to a custombuildofPython2.7.18 and my systemgdbwas linke Pythonscripts used byGDBshould be installed in data directory python where data directory is the data directory as determined atGDBstartup see Data Files

This directory known as thepythondirectory is automatically added to thePythonSearch Path in order to allow thePythoninterpreter to locate all scripts installed at this location 23.1.gdb7 and later 1ngdb7 supportfor extendinggdbwith Pythonwas added

When CPython is built you will notice a python gdb.py file in the root directory of your checkout. Read the module docstring for details on how to use the file to enhancegdbfor easier debugging of a CPython process You can usebuild_gdb.sh to buildyour ownGDBw Python3supportfor ARM target

The script will also create a special command for using GDBFrontend on your ownGDBbuild the generated Makefile in dir build gdb. With the new updated flags clang should be ablebuildgdbsuccessfully with no more errors. Rerun make and then make install while in the gdb build dir

Second be sure to update with python and with libgmp flags below to appropriate How to write aGDBpythonscript Here is an article that introduces the fundamental principles ofPythoninGDB. Read it to gain a basic understanding. Automate Debugging withGDBPythonAPI

For more documentation ongdbpython please refer to the official documentation ofGDB.GDBPythonAPI.
