ADSTILADRIN is indicated for the treatment of adult patients with high risk Bacillus Calmette Gurin BCG unresponsive non Muscle Invasive Bladder Cancer NMIBC with carcinoma in situ CIS Dec 9 2024 Adstiladrin nadofaragenefiradenovec vncg is a gene therapy used to treat high risk Bacillus Calmette Gurin BCG unresponsive non muscle invasive bladder cancer

Includes Adstiladrin side effects interactions and indications What is ADSTILADRIN? ADSTILADRIN nadofaragenefiradenovec vncg was approved in the United States in 2022 and is fully available for appropriate patients as a treatment that may help people live better lives on their bladder cancer journey. ADSTILADRIN is a localized gene therapy designed to help the immune system fight NMIBC directly within the bladder

Administered [ ] Dec 16 2022 Ferrings novel adenovirus vector based gene therapy Adstiladrin nadofaragenefiradenovec vncg is the first gene therapy approved for bladder cancer Efficacy and safety of Adstiladrin supported by Phase 3 results demonstrating that more than half of patients 51% of CIS Ta T1 cohort achieved a complete response CR at three months and of these 46% continued to remain free of high Sep 12 2023 ADSTILADRIN nadofaragenefiradenovec vncg is the first and only FDA approved intravesical gene therapy for the treatment of adult patients with high risk Bacillus Calmette Gurin BCG unresponsive non muscle invasive bladder cancer NMIBC with carcinoma in situ CIS with or without papillary tumors Apr 1 2025 Abstract On December 16 2022 the FDA approved the adenoviral vector based gene therapy nadofaragenefiradenovec vncg brand name Adstiladrin for the treatment of adult patients with high risk Bacillus Calmette Gurin BCG unresponsive non muscle invasive bladder cancer NMIBC with carcinoma in situ CIS

The product represents the first approved adenoviral vector based gene therapy and Nadofaragenefiradenovec sold under the brand name Adstiladrin is a gene therapy for the treatment of bladder cancer

[1][3][4] It is a non replicating cannot multiply in human cells adenoviral vector based gene therapy Nadofaragenefiradenovec uses a recombinant adenovirus that encodes for interferon alpha 2b gene

Intravesical instillation of interferon alone for bladder cancer produced complete responses that were short lived in previous studies Adstiladrin is also called nadofaragenefiradenovec vncg. Adstiladrin is a gene therapy that uses a non replicating adenoviral vector a modified virus that cannot multiply to deliver a gene to bladder cells

This gene makes a protein called interferon alfa 2b which activates the immune system to fight cancer cells

How do I take it? Clinical overview Indication ADSTILADRIN
