Nvidia designs graphics processing units GPUs for the gaming market as well as system on a chip units SOCs for the mobile computing and automotive market Newbie to the stock world here but I stuck 4k in NVIDIA in April ~30% of my portfolio and Im up to just under 5k now

Based on predictions of compound interest by the time Im 40 in 2030 this stock should be enough to give me a huge leg up to buying a decent property so Im taking the risk holding Jun 7 2024 Market Valuation and Economic Conditions The prediction of reaching a \$10 trillion market cap is not only about technological capability but also about market conditions

Stock market fluctuations changes in investor sentiment macroeconomic factors and geopolitical tensions can all significantly impact market valuation A study case NVIDIA stock being overpriced is just proving our point as value investors Key Points and reasons for optimism Expectations beating performance in the last year Hyperscalers big GPU investments Nvidias strong market position and competitive advantages and The companys new generative AI inference product

The biggest obstacle to Nvidias stock price topping \$1 000 is the companys recent success. How so? Every quarter in which Nvidia exceeds Mar 7 2024 In the last year I ve been mostly investing in ETFs like VOO just because I don t follow business investing news too much and ETFs seem easy

Anyway I m wondering if I should just sell all my NVDA 15 stocks and purchase VOO or SMH

Or do people think that this upward trend with NVDA will continue? Yes Nvidia is considered a good buy for the long term due to its strong position in AI and gaming markets but be mindful of valuation and market conditions.
