Lactation describes the secretion of milk from the mammary glands in addition to the period of time that a mother lactates to feed her young. The process can occur with all sexually mature female mammals although it may predate mammals. [1] Lactation is the process of making breast milk

This milk is secreted through your mammary glands which are located in your breasts. Lactation is hormonally driven and occurs naturally if you're pregnant. It can also be induced in those who are not pregnant

Lactation will continue as long as milk is being removed from your breasts Sep 23 2024 Lactation is the process of producing milk from your mammary glands to feed your young and almost all mammals do it

The lactation process typically begins in pregnancy and continues until you Lactation is the process by which milk is synthesized and secreted from the mammary glands of the postpartum female breast in response to an infant sucking at the nipple lactation secretion and yielding of milk by females after giving birth

The milk is produced by the mammary glands which are contained within the breasts. The breasts unlike most of the other organs continue to increase in size after childbirth LACTATING definition 1. present participle of lactate 2. of a woman or female mammal to produce milk

Learn more Nov 29 2023 Lactation Breast Milk Production Symptoms causes treatments and your questions answered. Lactation is the process of milk production and secretion from the mammary glands. To learn about breastfeeding as an intervention e.g

in comparison to using infant formula see our breastfeeding page Jul 17 2023 It requires the breast to change in composition size and shape during each stage of female development. Development includes puberty pregnancy and lactation

These stages are influenced by a cascade of physiologic changes that are crucial to successful breastfeeding Oct 16 2025 Understanding lactation helps learn how the human reproductive system supports both infant development and the mother's health

It is controlled by hormones like prolactin and oxytocin. Lactation begins soon after the parturition process. Any clinician who cares for women of childbearing age and cares for women who are lactating must consider both the effects of lactation on maternal health conditions and the effects of maternal health conditions on lactation.
