The use of DL methionine MET in poultry diet formulation is vital for poultry growth because poultry do not synthesize sufficient amounts of MET needed for proper growth and performance and currently there are insufficient natural sources of MET to fulfill the dietary needs of broiler chickens Dec 25 2022. Methionine supplementation in a low protein diet alleviates the negative effects of heat stress and improves the performance of chickens. Providing the amino acid methionine MET without oversupplying protein is generally the most difficult. Feed rations that are high in plant proteins such as soybean meal can be used instead of synthetic MET but high protein diets are not healthy for poultry or the environment Dec 25 2022. Methionine supplementation in a low protein diet alleviates the negative effects of heat stress and improves the performance of chickens. As an essential nutrient and a first limiting amino acid in several meal based poultry diets, methionine Met is of rich nutritional value and physiological functions. One of the pillars of nutrition is the use of amino acids in poultry diets, among which Methionine Met represents the first limiting amino acid in broilers. While it is naturally available through insects and plant proteins, synthetic sources of methionine are used in poultry feed as a way to meet the need for this amino acid without increasing protein levels in the feed Aug 24 2023. One of the pillars of nutrition is the use of amino acids in poultry diets, among which Methionine Met represents the first limiting amino acid in broilers. Feb 7 2025. Methionine, an essential amino acid, plays a pivotal role in animal nutrition.

As a widely used feed additive, it supports protein synthesis, enhances growth and improves overall feed efficiency Nov 26 2024. Using high quality L methionine in poultry feed provides multiple economic advantages for commercial farms.

By improving feed efficiency, reducing mortality rates and enhancing growth and production, methionine supplementation leads to a higher return on investment.
