The human legs are exceptionally long and powerful as a result of their exclusive specialization for support and locomotion. In orangutans the leg length is 111% of the trunk, in chimpanzees 128% and in humans 171%. Leg limb or appendage of an animal used to support the body, provide locomotion and in modified form assist in capturing and eating prey as in spiders and insects.

In four limbed vertebrates all four appendages are commonly called legs, but in bipedal animals only the lower two are so called. Dec 29 2021 The muscles in your upper and lower legs work together to help you move, support your body's weight and allow you to have good posture.

They enable you to do big movements like running and jumping. Oct 20 2025 Many different muscles are located in the lower leg between the knee and the ankle. Some of the main ones include: This article describes the anatomy of the lower leg muscles. It covers where they're located and what they do.

Your muscles in the lower leg are supported by two very strong long bones: the fibula and the tibia (shin bone). The meaning of LEG is a limb of an animal used especially for supporting the body and for walking. How to use leg in a sentence: informal if you say that a news story etc.

has legs you mean that people will continue to be interested in it for a long time. Out of all the bones in the human body, the bones in the leg are specially designed to withstand the daily strain as you stand in lines, run after your bus, play football or walk back home after a tiring day.

Humans have 60 leg bones, 30 in each leg.
