Git clone will clone remote branch into local. Is there any way to clone a specific branch by myself without switching branches on the remote repository?

Jul 2 2022 When I try to open VS Code this error sentences popped up

How can I solve it? A JavaScript error occurred in the main process Uncaught Exception Error Cannot find How can I download only a specific folder or directory from a remote Git repository hosted on GitHub? Say the example GitHub repository lives here git github foobar Test.git Its directory str I think this is not a duplicate of Git undo last commit as it asks how to delete any commit from a branch

I also think non of the answers actually address this question. They all rewind the last commits not cherry pick and delete a single commit that may occurred a while ago Feb 25 2016 I need help on my Excel sheet

How can I declare the following IF condition properly? if $A1 = n$ a then $C1 = B1$ else if $A1 \neq n$ a or has value int then $C1 = A1 * B1$ I think you need to push a revert commit. So pull from github again including the commit you want to revert then use git revert and push the result

If you don t care about other people s clones of your github repository being broken you can also delete and recreate the master branch on github after your reset git push origin master I have the following commit history HEAD HEAD~ HEAD~2 HEAD~3 git commit amend modifies the current HEAD commit

But how do I modify HEAD~3? Jan 5 2010 Don t forget to do a git fetch all prune on other machines after deleting the remote branch on the server

After deleting the local branch with git branch d and deleting the remote branch with git push origin delete other machines may still have obsolete tracking branches to see them do git branch a

To get rid of these do git fetch all prune May 23 2017 Just in case someone looking for a solution to this for a Windows based system or NAS There is a built in function in Windows that shows you what files on the local computer are open locked by remote computer which has the file open through a file share Select Manage Computer Open Computer Management click Shared Folders choose Open Files There you can even close the file forcefully Mar 3 2021 It seems some other process is constantly creating the lock file

Try restarting your computer. Also try a new clone and check if it works in the new cloned repository.
