The discipline of origami or paper folding has received a considerable amount ofmathematicalstudy. Fields of interest include a given paper model s flat foldability whether the model can be flattened without damaging it and the use of paper foldsto solvemathematicalequations up to the third order

[1] A typesetmathematicalexpression Aformula editoris a computer program that is used to typesetmathematicalformulasandmathematicalexpressions.Formulaeditors typically serve two purposes They allow word processing and publication of technical content either forprintpublication or to generate raster images for web pages or screen presentations

They provide a means for users to Since it is based on Lisp which is a functionalprogramminglanguage REDUCE supports functionalprogrammingand all statements have values although they are not always useful

REDUCE also supports proceduralprogrammingby ignoring statement values Glossaryof mathematical symbolsAmathematicalsymbol is a figure or a combination of figures that is used to represent amathematicalobject an action onmathematicalobjects a relation betweenmathematicalobjects or for structuring the other symbols that occur in aformulaor amathematicalexpression Thelanguage of mathematicsormathematicallanguageis an extension of the naturallanguage for example English that is used inmathematicsand in science for expressing results scientific laws theorems proofs logical deductions etc

with concision precision and unambiguity Programminglanguageswith built in support for constraints include Oz functionalprogramming and Kaleidoscope imperativeprogramming

Mostly constraints are implemented in imperativelanguagesvia constraintsolvingtoolkits which are separate libraries for an existing imperativelanguage Asolveris a piece ofmathematicalsoftware possibly in the form of a stand alone computer program or as a software library that solves amathematicalproblem

Asolvertakes problem descriptions in some sort of generic form and calculates their solution

In asolver the emphasis is on creating a program or library that can easily be applied to other problems of similar type There are two key types of well formed expressions terms which intuitively represent objects andformulas which intuitively express statements that can be true or false

The terms andformulasoffirst order logicare strings of symbols where all the symbols together form the alphabet of thelanguage.
