Oct 22 2025 Acromegaly is a rare hormonal condition in adults that causes some bones organs and other tissues to grow bigger. A small gland in the brain called the pituitary gland drives these changes by making too much growth hormone GH

High GH levels increase another hormone called insulin like growth factor 1 IGF 1

This usually happens due to a noncancerous also called benign pituitary tumor Oct 22 2025 Today with earlier diagnosis and better treatments the life expectancy with treatment for acromegaly is close to that of people without acromegaly

Many people with acromegaly can live a typical lifespan if their GH and IGF 1 levels are lowered and maintained at healthy levels with treatment. What is the prognosis for acromegaly? Dec 18 2025 Cuando el cuerpo tiene demasiada hormona del crecimiento los huesos aumentan de tamaño

En la niez esto lleva a una mayor estatura como parte de una afección llamada gigantismo. En los adultos con acromegalia la estatura no cambia pero los huesos de las manos los pies y la cara aumentan de tamaño

Otros cambios pueden incluir dolor en las articulaciones engrosamiento de la piel y Jun 26 2025 Several other conditions may look similar to acromegaly but the causes and symptoms are different. Acromegaly vs

gigantism Gigantism happens when too much growth hormone is produced before puberty while the bones are still growing

Children with gigantism grow unusually tall with very long arms and legs Oct 22 2025 Acromegaly care at Mayo Clinic Your Mayo Clinic care team At Mayo Clinic people with acromegaly and pituitary tumors receive care from an integrated team of specialists
