The king penguin *Aptenodytes patagonicus* is the second largest species of penguin smaller than but somewhat similar in appearance to the emperor penguin

King penguins mainly eat lanternfish squid and krill King penguin *Aptenodytes patagonicus* second largest member of the penguin order Sphenisciformes characterized by its dignified upright posture long bill and vivid coloration Kingpenguinsare like emperor penguins in that they do not build nests

Instead the male and female take turns cradling their eggs on top of their feet and keeping young warm with a special Kingpenguinstend to form large dense colonies. Several hundred thousand breeding pairs occupy the largest populations found at South Georgia and Crozet islands

The colonies occupy beaches valleys and moraines free of snow and ice. They prefer level ground near the sea Large spectacular and basically unmistakablepenguinthat is rarely seen away from well known colony sites

The long and stout bill distinguishesKingfrom the even larger but shorter billed EmperorPenguin which is a true Antarctic species rarely seen far from ice The second largest of thepenguins kingpenguinsare easily confused with emperor penguins due to their size and vivid markings and the fact that they incubate their eggs under a brood pouch on their feet What areKingPenguins where and how long do they live what do they eat their characteristics behavior and predators explained with pictures Information and facts aboutKingPenguins

Learn aboutpenguinscience habitat diet range populations and threats to these aquatic birds Discoverkingpenguins their size breeding cycle diet predators and the best places to see them from South Georgia to the Falkland Islands Kingpenguins *Aptenodytes patagonicus* can be found around the Oceanic Islands in sub Antarctic and temperate waters

Their breeding grounds include Tierra del Fuego the Falklands Crozet and the islands southeast of Australia and southwest of New Zealand.
