Nov 7 2025 Although all patients undergoing totalhipreplacementshould be counseled about the risk ofsqueaking ceramic on ceramic bearing surfaces in particular remain an issue Imagine going from having a painful arthritichto asqueakingbut pain freehip

That can happen after a totalhipreplacement THR

What causes this problem? And what can be done about it? Those are the two questions answered in this article Imagine if that noise was coming from yourhipreplacement! At least with asqueakypair of shoes you can take them off.Squeakyhipreplacements are not so easy to correct

The problem ofsqueakinghips after jointreplacementhas increased in the last 10 years with the increased use of hard on hard bearings

What do we mean by hard on hard Abstract Background Postoperativesqueakingin patients who applied the fourth generation ceramic bearing in primaryhipreplacementhas not been reported systematically we aim to study thesqueakingincidence in the fourth generation ceramic bearing and related risk factors forsqueaking and we also attempt to explore the relationship between squeakingand prosthetic brands

Methods The Patient Characteristics Squeakingcould be driven by some patient related factors like age weight and your standard gait

Losing weight or undergoing physical therapy to correct a gait issue can help to mitigatesqueakingin yourhipthat is the result of these causes Aug 25 2025 A dislocatedhipreplacement though uncommon causes severe pain and an inability to bear weight often with a distinct popping sound

Althoughsqueakingfrom ceramic implants is often benign persistentsqueakingsignificantly impacting quality of life may warrant investigation as it can indicate an underlying biomechanical problem Doesn t it seem odd that after 30 or more years using ceramic implants forhipreplacements that suddenly there is an increased number of patients reportingsqueakingwhen they move? And this new problem only started in 2006

What s going on? Dec 3 2020 BackgroundSqueakingof ceramic on ceramic totalhiparthroplasty is an unexpected complication which occurs in 1 30% of patients

Revision surgery is required in 0.2% of the cases when a ceramic fracture is suspected or in case of severe malposition of the implants subluxation or impingement.Hiparthroscopy may be a useful diagnostic and therapeutic option insqueakinghips
