VPN compatibilityMajorVPN providers offer a GUI application which handles all aspects of the connection. Every now and then the topics on troubleshooting a given VPN provider surfaces and a lot of topics boils down to DNS and for good reason

Whether you are using an app offered by your provider or you are using configuration files it is of utmost importance you ensure correct configuration Jun 16 2025 What kernel does Manjaro generally use? Does it use the latest kernel 6.15.2 or does it use LTS 6.12.33 or something else based on curation? I noticed the ISO said 612 Oct 25 2024 Hello please dont take this the wrong way

I appreciate your time and work on Linux Manjaro and I understand that some things simply take longer sometimes. As far as I can see the lastmajorARM Stable update was in March 2024 which means its been more than 7 months

Looking back at previous updates this seems like quite a long time especially for a rolling OS. I find bug fixes and Dec 21 2025 Hello everyone! Since one of the lastmajorupdates my touchpad has stopped working. Ive found posts from people with similar problems but their fixes didnt work for me

As far as I can tell the touchpad driver isnt functioning correctly but nothing Ive found so far has fixed it

The only thing that worked was switching to kernel 6.1 but then my Wi Fi and likely other things Dec 21 2025 After themajorupdate to Wayland from X11 the External monitor shuts off when I close the laptop monitor the lid of the notebook

It happens even in the energy option it is not marked that standby mode should not be activated when closing the laptop monitor if external monitor is connected. I tried it out with Thunderbolt 4 connection Mar 6 2025 Yesterday there was amajorupgrade. I use manjaro sway

Before I did the upgrade yesterday the ssh server was working. Now although openssh is installed when I do sudo systemctl start ssh I get the error Failed to start ssh.service Unit ssh.service not found Same issue on my other computer with manjaro after upgrade

When I run systemctl.status sshd it says Loaded but inactive. I Dec 26 2022 Thismajorupdate 22.0 installed kernel 6.1.1 1 An update does not install new kernels only update existing ones so the update didnt install 6.1 you did

And for the record I have been using 6.1 all throgh the development stages and no issues at all. I dont know if it is applicable for your system but take a look at AMDGPU Jun 21 2025 Hi everybody I decided to switch to Linux finally
