Jul 16 2024 I have a NextJS application that is using Backblaze B2 Cloud Storage to store videos and photos that a user wishes to upload. I seem to be having an odd issue when trying to upload files

Basically May 5 2025 1 I m using Laravel s filesystem with the S3 driver to connect to Backblaze B2 s S3 compatible API

Here s my disk configuration in config filesystems.php May 14 2023 I m trying to upload images to BackBlaze using backblaze b2 npm module from a folder that has multiple images and for each image successfully uploading I push the fileId to an array all the files i May 2 2023 Yes you can do this using the AWS CLI

The aws s3 cp command can read stdin or write to stdout by using instead of a filename so you can pipe two aws s3 cp commands together to read a file from Backblaze B2 and write it to Amazon S3 without it hitting the local disk

First configure two AWS profiles from the command line one for B2 and the other for AWS

aws configure will prompt you Mar 27 2023 BTW we Backblaze I m Chief Technical Evangelist there advise developers to use the AWS SDKs and the Backblaze S3 Compatible API unless there s a particular reason to use the B2 Native API for example manipulating application keys Nov 8 2023 How to update corsRules for Backblaze b2 Cloud Storage using CLI or how to bypass blocking by CORS policy? Asked 2 years 1 month ago Modified 1 year 10 months ago Viewed 1k times Oct 26 2024 The problem is that Backblaze isn t adding the Access Control Allow Origin header to the options preflight request

I have set the B2 CORS rules using the command line Jul 1 2024 We use Backblaze B2 for storage and currently we create a separate bucket whenever an organization is created which works fine. However I need to limit the bucket upload size according to the subscription plan the user has purchased

I have researched a lot but couldnt find a way to enforce storage limits on Backblaze buckets Dec 21 2024 I m working of a S3 Navigator and trying to use Backblaze B2 s S3 compatible API in my Angular application to authenticate and list buckets using the AWS SDK s S3Client

While this code works perfe I want to use Backblaze B2 to serve media files only in Django. I have used django storages for that purpose and as per it s documentation it support Backblaze B2.
