To troubleshoot a network problem I would like to inquire the real network speed for a given network adapter which can be seen when opening the status of a network connection under Windows Ho Jul 23 2013 How can I test the speed of a LAN? I hope there is something baked into Windows to do this because I am unable to install any third party products Mar 10 2018 This does not address How to measure LAN speed between these two computers explicitly? Speed is maximal number of bytes can be sent per second

Ideally always test with a wired connection to limit factors wifi interference

Here is a few steps i would do in order to find the problem and test network speed First make sure that the links between your NAS and network is correctly beeing displayed as gigabit and that your cable are OK Please add the OS and router model you have

BTW you can connect the laptop both wired and wireless eventually with a virtual network device and test the transfer data speed between the two connections The bottleneck is the wireless connection Apr 22 2013 I can speed test both locations of course but that isn t necessarily representative of the actual throughput between the two points

Given the different ISP s and service speeds I imagine I d get different results depending on which end I test from

One connection has 3x the upload speed making it the better server end I believe Jan 10 2018 Doing a speed test from PC to PC etc may not be accurate because your computing power might need to be very powerful in order to push that kind of data

CAT6A would guarantee up to 90 meters whereas CAT 7 would be guaranteed for 100 meters for 10Gbps speed. At last the cables may not matter because you may just have 1Gigabit network links Nov 18 2018 iperf to test plain network speed

Use ftp transfer of big continuous file to test network speed + writing to NAS drive. Small files will slow down transfers. If you got acceptable speed over ftp then tweak samba settings to improve throughput. Cables very rarely improving speed it is either working or not

Upgrade to gigabit network it will benefit throughput even with devices that can talk Jul 9 2013 I ran my Internet connection through SpeedTest which claims that it finds out the actual Internet speed much lower than that promised by my ISP

Butwhile downloadingthe speed is much lesser than the test results Dec 7 2017 Is there any way to measure precisely bandwidth between two computers in a LAN?.
