There are two distinct categories of milk consumption: all infant mammals drink milk directly from their mothers' bodies, and it is their primary source of nutrition; humans obtain milk from other mammals for consumption by humans of all ages as one component of a varied diet. Milk is essentially an emulsion of fat and protein in water along with dissolved sugar, carbohydrate, minerals, and vitamins.

These constituents are present in the milk of all mammals, though their proportions differ from one species to another and within species. See Table. Oct 1 2025
