@mirror nudes@ Can I prevent my bathroom mirror from fogging up? 3 Drive Configuration TrueNAS Community Managing.

â â â â â Rating: 5 (8.299.899 reviews) - Free ´• Mirror ´• Access

Sep 14 2022 My bathroom is not very large and especially during winter themirrortends to fog up after the shower has been in use

Is there something I can do to avoid themirrorfogging up? I seem to vaguely Sep 8 2021 The drive prices for 16TB drives specifically Exos are pretty decent compared to 10TB I think thus why I want 16TB

Are there any downsides to a 3 waymirror? Would it allow two out of the three drives fail without incident? Also if you know any documentation on it that would help a lot

Also with RAIDZ adding drives to a pool later requires resilvering does amirror 3 waymirrorrequire Apr 25 2025 Extend a ZFSmirror Add the same number of drives. The result is a stripedmirror

For example if ten new drives are available amirrorof two drives can be created initially then extended by adding anothermirrorof two drives and repeating three more times until all ten drives are added

Extend a three drive RAIDZ1 Add another three drives Sep 6 2023 After confirming going from stripe tomirrorwas possible I went ahead and built my system with two storage pools. An main pool with 2 x 8TB drives for bulk storage and a fast pool with SSD s

At the time of building the fast pool I only had access to a single 750GB SSD. Knowing that I could extend the pool later I configured it as a stripe Aug 18 2023 Adding a second storage device to the boot pool changes the configuration to aMirror

This allows one of the devices to fail and the system still boots. If one of the two devices were to fail that device is easily detached and replaced

When adding a second device to create a mirrored boot pool consider these caveats Capacity The new device must have at least the same capacity as the Apr 25 2025 Now that you have logged in to the web interface its time to set up TrueNAS storage

These instructions demonstrate a simple mirrored pool setup where you use one disk for storage and the other for data protection

However there are many configuration possibilities for your storage environment! You can read more about these options in the in depth Pool Creation article Sep 24 2018 Traditional RAID 1 mirrors usually only support two drive mirrors but ZFS allows for more drives permirrorto increase redundancy and fault tolerance

All disks in a mirrored vdev have to fail for the vdev and thus the whole pool
