Apr 1 2025 When you use attack surface reduction rules you might run into issues such as A rule doesn't work as described or doesn't block a file or process that it should false negative. There are four steps to troubleshooting these problems Confirm prerequisites

Use audit mode to test the rule Nov 9 2022 Unfortunately we can only query the Azure AD Device ID and not the Object ID that we need to add the devices to groups so we will need to use PowerShell modules or the Graph API to look up the Object ID for a given Device ID Oct 4 2024 In this article I want to break down the Defender Attack Surface Rules ASRRules and show you what components each rule takes care of and overall how they can minimize the attack surface Microsoft Defenders Attack Surface Reduction ASR rules are critical for blocking malicious activities but misconfigurations can leave gaps

Roy KloostersASRRule Inspector PowerShell script validates yourASRRules enforcement status and provides a clear overview Sep 16 2025 There is no single way to add an exclusion for attack surface reduction rules

There are several different methods You can add an exclusion for allASRRules at once or an exclusion scope to a specific rule. Wildcards are supported meaning you can whitelist entire folder paths or specific files Clone the repository to your local machine

Ensure you have the necessary dependencies installed. This project primarily uses Python and PowerShell. Navigate through the codebase and familiarize yourself with the structure and content

The project consists of the following key components Jul 15 2020 You can enableASRRules by configuring them in the Endpoint Security settings or by creating a dedicatedASRpolicy

Explore each rule's specific capabilities they can be a game changer Feb 19 2025 To address this issue and ensure that similar incidents would be visible in the future I created a custom KQL query to monitorASRRule events related to vulnerable signed drivers May 21 2025 With KQL you can This advanced hunting query identifies instances where the Attack Surface Reduction ASR rule was triggered

It searches for executable and script files blocked or audited by DefendersASRRules across devices. Key details returned include Sep 29 2025 Advanced hunting is a query-based Kusto Query Language threat hunting tool that lets you explore up to 30 days of the captured data

Through advanced hunting you can proactively inspect events in order to locate interesting indicators and entities.
