The new keyword in JavaScript can be quite confusing when it is first encountered as people tend to think that JavaScript is not an object oriented programming language. What is it? What problems You should use new when you wish an object to remain in existence until you delete it

If you do not use new then the object will be destroyed when it goes out of scope

Using \_blank as a target value will spawn a new window every time while using \_new will only spawn one new window and every link clicked with a target value of \_new will replace the page loaded in the previously spawned window I was searching on this link before finding this answer

I did not find the solution in the link because I was looking for new line or new line instead of line feed  
Sep 5 2016 This is to show new line and return carriage in HTML. Then you don't need to do it explicitly. You can do it in CSS by setting the white space attribute pre line value.
