Sep 20 2016 Anibble often nybble is the computing term for a four bit aggregation or half an octet an octet being an 8 bit byte May 14 2009 I m programming network headers and a lot of protocols use 4 bits fields

Is there a convenient type I can use to represent this information? The smallest type I ve found is a BYTE. I must then us Jun 24 2010 Is there an easy way to read write anibblein a byte without using bit fields? I ll always need to read both nibbles but will need to write eachnibbleindividually

Thanks! Nov 6 2022 I am looking to learn how to get two nibbles high and low from a byte using C and how to assemble two nibbles back to a byte

I am using C and .NET 4.0 if that helps with what methods can be do Dec 23 2018 While I know how to copy one bit from one byte to another as explained here Link I have a problem for a full 4 bit shift from one byte to another byte from a different array especially for up Jan 25 2023 Some would consider the firstnibbleas the least significantnibble

Whatever is first or last makes little difference here as they are swapped Sep 28 2013 But as already stated in the comments when you cut a byte in half dividing the upper and the lower 4 bits each half is usually referred to asnibble

This thing probably has a name since in hex editors you actually see and work with nibbles the two hexadecimal digits used to represent each byte so it makes sense to call them in some way Jan 21 2023 Write a function that swaps the highest bits in eachnibbleof the byte pointed to by the pointer b

i.e. 0bAxxxBxxx gt 0bBxxxAxxx. I have a predefined function with this prototype void swapB Feb 11 2025 I m currently studying encryption and I was coming up with ways of reversing the nibbles of a byte ex. 0xF5 => 0x5F

I came up with this solution byte >> 4 byte 0x0F << 4 Dec 23 2016 A lot depends on how your flexible you are in accepting the nibblelist index[4] in your case. You mentioned that you can replace anywhere from 0 to 8 nibbles

If you take yournibblebits as an 8 bit bitmap rather than as a list you can use the bitmap as a lookup in a 256 entry table which maps from bitmap to a fixed mask with 1s in thenibblepositions. For example for thenibble.
