Dec 22 2008 I m a MySQL guy working on a SQL Server project trying to get a datetime field to show the current time. In MySQL I d useNOW but it isn t accepting that

INSERT INTO timelog datetime_filed Sep 15 2008 DateTime.Nowgives the date and time as it would appear to someone in your current locale

I d recommend using DateTime.Nowwhenever you re displaying a date to a human being that way they re comfortable with the value they see it s something that they can easily compare to what they see on their watchorclock Jun 8 2015 I have a timezone which is float for example 4.0

I want to construct datetime with given timezone

I tried this datetime.now timezone but it throws TypeError tzinfo argument must be None Dec 17 2011 Is there a way in a MySQL statement to order records through a date stamp by >=NOW 1 so all records from the day before today to the future are selected? Is there a PHP function that returns the date and time in the same format as the MySQL functionNOW ? I know how to do it using date but I am asking if there is a function only for this

For May 29 2025 July 29 2025 Update The 2025 Dev Survey results are now live! The technology section is updated this year with the 5 most common write in responses for technologies used and want to use and new Dec 20 2010 In VB code I create requests with SQL parameters

If I set a DateTime parameter to the value DateTime.Now what will my request look like ? UPDATE table SET date = 2010 12 20 10 25 00 or Jun 12 2015 The first thing I noticed was that performance.now is 4 times slower than Date.now 400k operations vs 100k on my computer

However if you want accurate timing time since page load using performance.now is the better option. It s purely dependent on the time since the code started running and clock changes do not affect the time. It s also more accurate counting tenths of a You now have the latest Node.js on your machine

And if you need to temporarily switch to a different previous version you can do it with a simple nvm command Jul 1 2011 The DateTime.Nowproperty returns the current date and time for example 2011 07 01 10 09.45310

The DateTime.Today property returns the current date with the time components set to zero for example 2011 07 01 00 00.00000.
