Sep 28 2012 If this is what you are asking %pand %Fp print out a pointer  
specifically the address to which the pointer refers and since it is printing  
out a part of your computer s architecture it does so in Hexadecimal

In C you can cast between a pointer and an int since a pointer is just a 32 bit  
or 64 bit number depending on machine architecture referring to the  
aforementioned chunk of memory Learn when to use <p> for paragraphs and <br> for  
line breaks in HTML on Stack Overflow Nov 14 2015 What does this regexp mean  
\p{Lu} ? Asked 11 years 3 months ago Modified 10 years 1 month ago Viewed 27k  
times Feb 9 2010 What is the difference between lt p> and lt div>? Can they be  
used interchangeably? What are the applications? May 7 2010 This Stack Overflow  
thread discusses methods to reduce space between HTML tags providing solutions  
for managing spacing issues in web development Mar 3 2010 %pwill also use an  
adequate textural representation for pointer for the platform

On platforms where it is common to represent pointer in hex this won t make a  
difference as long as the size is correct but for a segmented architecture do  
you remember DOS? it may use a segment offset representation Feb 13 2013 2 I  
would say the second one than the <p> is not inheriting attributes of <a> and  
keeping it s original formatting Mar 12 2012 5 I am still struggling to  
understand the difference between \*p p andp

From my understanding \* can be thought of value pointed by and as adress of. In  
other words \* holds the value while holds the adress

If this is true then what is the distinction between \*pandp? Doesn tphold the  
value of something just like \*p? Jan 5 2015 What does pstand for in set p=? I  
know that enables a switch and I m fairly sure that I know a is for arithmetic

I ve heard numerous rumours some saying pis for prompt others stating it Dec 15  
2009 The <p> tag is aparagraph and as such it is a block element as is for  
instance h1 and div whereas span is an inline element as for instance b and a  
Block elements by default create some whitespace above and below themselves and  
nothing can be aligned next to them unless you set a float attribute to them

Inline elements deal with spans of text inside a paragraph. They typically.
