Nov 21 2025 The `srccdoc` property of the `HTMLIFrameElement` interface gets or sets the inline HTML markup of the frame's document. The `srccdoc` property sets or returns the value of the `srccdoc` attribute in an `iframe` element.

The `srccdoc` attribute specifies the HTML content of the page to be shown in the inline frame. Jul 12 2025 The `HTML srccdoc` attribute is used to specify the HTML content of the page to show in the inline frame. This attribute is anticipated to be used beside the `sandbox` and `seamless` attributes.

If a browser supports the `srccdoc` attribute, it will override the content laid out in the `src` attribute if present. Dec 17 2025 Here, a blog uses the `srccdoc` attribute in conjunction with the `sandbox` attribute described below to provide users of user agents that support this feature with an extra layer of protection from script injection in the blog post comments. Jan 21 2021 History navigation toward about `srccdoc` is supported in Chrome, Firefox.

I double checked this was working independently of a potential backforward cache. I tested Firefox 87.

Proof Contrary to what is said above, this is implemented in every web browser so it won't be easy to remove this feature without breaking websites.

The `srccdoc` attribute is a feature associated with the `<iframe>` HTML element, enabling web developers to specify the HTML content of the `iframe` directly inline within the attribute rather than referencing an external resource through the `src` attribute.

This capability allows for embedding small snippets of HTML directly into a parent page without the need for creating separate pages. Feb 11 2025 A comprehensive guide to the `HTML Framesrccdoc` property detailing its usage, syntax, and providing practical examples for embedding HTML content directly into frames without external files. So, the `srccdoc` attribute overrides the content embedded using the `src` attribute.

Demo Note The `seamless` attribute has since been removed and another answer describes how the `sandbox` attribute should be used with the `srccdoc` attribute; both attributes were introduced in HTML5. The `sandbox` attribute should be used in case the `srccdoc` contains untrusted content. May 6 2025 The `HTML DOM IFrame srccdoc` property is used to set or return the value of the `srccdoc` attribute of an `<iframe>` element.

The `srccdoc` attribute is used to specify the HTML content of the document in the `<iframe>` element about `srccdoc`. This URL commits when an `iframe` is created with the `srccdoc` parameter to define its contents.

The contents can only be defined by the parent or a same origin document with
