A large language model LLM is a language model trained with self supervised machine learning on a vast amount of text designed for natural language processing tasks especially language generation

[1][2] The largest and most capable LLMs are generative pre trained transformers GPTs and provide the core capabilities of modern chatbots

LLMs can be fine tuned for specific tasks or guided Feb 7 2024 So what is anLLM? AnLLM is a machine learning neuro network trained through data input output sets frequently the text is unlabeled or uncategorized and the model is using self supervised Large language models LLMs are a category of deep learning models trained on immense amounts of data making them capable of understanding and generating natural language and other types of content to perform a wide range of tasks Sep 18 2025 Large Language Models LLMs are advanced AI systems built on deep neural networks designed to process understand and generate human like text

By using massive datasets and billions of parameters LLMshave transformed the way humans interact with technology Aug 15 2024 In simpler terms anLLM is a computer program that has been trained on many examples to differentiate between an apple and a Boeing 787 and to be able to describe each of them

Before they re ready for use and can answer your questions LLMsare trained on massive datasets Aug 25 2025 Large language models LLMs are advanced language models with vast parameters and datasets enabling them to process longer text sequences and perform complex tasks like summarization and Large language models orLLMsfor short are an increasingly popular type of artificial intelligence designed primarily to generate human like responses to user inputs provided by text voice or other means Large language models also known asLLMs are very large deep learning models that are pre trained on vast amounts of data

The underlying transformer is a set of neural networks that consist of an encoder and a decoder with self attention capabilities Aug 18 2025 By definition an LLM is a type ofdeep learning modelthat uses massive datasets and billions of parameters to perform language related tasks

An LLM handles tasks such as answering questions translating text writing content and summarizing information AnLLM or large language model is a machine learning model that can comprehend and generate human language
