The Nine Planets is an encyclopedic overview with facts and information about mythology and current scientific knowledge of the planets, moons and other objects in our solar system and beyond. Sep 29 2020 A star that hosts planets orbiting around it is called a planetary system or a stellar system if more than two stars are present.

Our planetary system is called the Solar System referencing the name of our Sun and it hosts eight planets. The eight planets in our Solar System in order from the Sun are the four terrestrial planets Mercury, Venus, Earth and Mars followed by the two gas giants. Sep 17 2020 The planets in order from the Sun based on their distance are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune.

Click for more facts: The solar system consists of the Sun, the eight official planets, at least three dwarf planets, 130+ satellites and a large number of small bodies. Sep 25 2019 Mercury is the closest planet to the Sun, but perhaps surprisingly, it does not have the highest temperatures.

Click for even more facts: Dec 6 2019 Earth is the third planet from the Sun and the fifth largest planet in the Solar System, with the highest density.

Click for even more facts and information: Dec 6 2019 The Planets of the Solar System. Detailed information and facts about the eight planets and five dwarf planets in our solar system. Sep 26 2019 Uranus is the seventh planet discovered in the Solar System, and it also led to the discovery of the last planet.

Click for even more facts and information: Dec 6 2019 Saturn is the sixth planet from the Sun, with the largest planetary rings in the Solar System.

Click for even more facts and information on Saturn: Sep 25 2019 Mars is the fourth planet from the Sun and the second smallest planet with a thin atmosphere.

Click for even more wonderful Mars facts.
