May 7 2018 I recently got fibre with a Plusnet Hub1 router. I have a Mac and in Finder I notice that in the left hand column under shared is pnhub1. However when I click on that I get a message Connection Failed

I tried the Connect As button and connecting as a Registered User entered my name and passw Jun 18 2023 The ERX WAN interface just needs to have an IP address on the same subnet as the PN hub LAN interface

If thePNHubis using 192.168.1.1 24 192.168.1.254 24 I would set the ERX WAN interface to 192.168.1.2 24 24 is shorthand for setting the subnet mask to 255.255.255.0 meaning the mask has 24 bits set

The gateway address is the PN hub 192 Mar 7 2016 \$ nanddump f mnt pnhub\_notpornhub.nanddump dev mtd6 Then backup the calibration data incase I wish to restore \$ ubidetach m 4 \$ ubidetach m 5 \$ ubiattach m 5 \$ dd if= dev ubi0\_3 of= tmp pnhub caldata backup \$ cp tmp pnhub caldata backup mnt Now we are pretty much done all we need to do is unlock the bootloader by running this Hey up So i ve recently been experimenting with running alternate firmware specifically Tomato DD WRT OpenWRT on various spare routers I had kicking around the place it then occurred to me I have a spare Plusnet Hub One

The specs of this hardware are actually pretty respectable CPU 500MHz MIP From there things go wrong when I use the nanddump f mnt pnhub\_notpornhub.nanddump dev mtd6 command to backup the firmware

It ll start backing up but a minute or two later it will say REBOOT and go back to the ROM VER 1.1.4 CFG 04 UART screen Nov 23 2023 Safeguard was working for me for the past 3 years then suddenly it is not working at all for me as well

tried restarting the router turning on and off the safeguard DNS of wifi is pointing to the router which has the auto allocated DNS from Plusnet. Does anyone else experience this problem or could advise?.
