Sep 28 2021 In Postgres the value placeholder is $ which one is recommend when the value is the same reusing the value placeholder or not? db.Exec INSERT Jun 8 2021 How to use placeholders in PostgreSQL? In SQL systems other than Postgres such as MySQL for instance prepared statements can use question marks as a placeholder for data in prepared statements

I am not sure how to create placeholders in Postgres Jan 3 2021 Posted by u VeryKnave 1 vote and 4 comments Mar 27 2024 A function FILTER has been used in a True False expression that is used as a table filter expression

This is not allowed Apr 12 2021 I know I m overlooking something simple so I have a simple table report to use a power bi dataset you copy the dax code from a simple table visual and paste into the advanced query editor in Power BI report builder. Fine. Works great

But I cannot add any parameters that actually work

Ie a simple list based on one of the fields in my report that just asks the user to select from a Dec 17 2019 placeholder = VALUES for i c = range columns { if i == 0 { *query += c placeholder += ? } else { *query += +c placeholder += ? } } placeholder += *query += + placeholder } convert []string to []interface{} func string2interface s []string []interface{} { i = make []interface{} len s for k v = range s { Mar 18 2022 The question mark is a placeholder in your SQL statement that is given a real value when the statement is executed

They re known as query parameters. As others have said they re a way to prevent SQL injection but also they make your code much more readable in any case so if you re putting SQL into any programming language use parameters Jul 26 2022 93 votes 16 comments

Why are the names John Jane Doe used as placeholder names instead of any other name? Apr 23 2024 Direct Query you want to manipulate the data in the database or whatever your source is as described by the other commenter You want to pretty much create a view or something that has most of what you want how you want it and then just pull that into Power BI Nov 2 2021 Technically you have the right amount but you re missing parentheses and commas and it s broken up throughout your query which I suspect is confusing SQL

Just like the values are separated with commas and surrounded in parentheses so too must the placeholders. Otherwise SQL won t know how to interpret them and match them up.
