

#pop shots 10# Difference between del remove and pop on lists in Python

Block or allow pop ups in Chrome Android.

Rating: 5 (8.610.659 reviews) - Free • Pop • Access

Original URL: <https://tools.orientwatchusa.com/pop-shots-10.pdf>

The usual use of `pop` is to delete the last item from a list as you use the list as a stack. Unlike `del` `pop` returns the value that it popped off the list

You can optionally give an index value to `pop` and `popfrom` other than the end of the list e.g. `listname.pop 0` will delete the first item from the list and return that first item as its result. Turn pop ups on or off on your Android phone or tablet open the Chrome app

To the right of the address bar tap More Settings. Tap Permissions Pop ups and redirects. Turn off Pop ups and redirects. Allow pop ups from a specific site. Not all pop ups are ads or spam

Some legitimate websites display web content in pop up windows. On your Android phone or tablet open the Chrome app. Go to `Settings`. It's easiest to use Gmail on multiple email clients using IMAP. If you need to use POP instead of IMAP set up Recent mode

Recent mode shows your last 30 days of emails from Gmail. In your email client's POP settings page find the Email address or User name field. Change your POP settings so that your emails are left on the server

Apple Mail On the Advanced tab uncheck the box Turn on POP or IMAP or both. You can turn on POP and IMAP or turn them on independently of each other

Restrict which IMAP clients people can use. You can choose to allow all IMAP clients or specify only allowed clients. Jun 11 2014 `list.pop [i]` Remove the item at the given position in the list and return it. If no index is specified `a.pop` removes and returns the last item in the list

The square brackets around the `i` in the method signature denote that the parameter is optional not that you should type square brackets at that position. Mar 8 2013 `git stash pop` throws away the topmost by default stash after applying it whereas `git stash apply` leaves it in the stash list for possible later reuse or you can then `git stash drop` it

This happens unless there are conflicts after `git stash pop` in which case it will not remove the stash leaving it to behave exactly like `git stash apply`

Another way to look at it `git stash pop` is git 2. I could reproduce clean `git stash pop` on a dirty directory with uncommitted changes but not yet `pop` that generates a merge conflict

If on merge conflict the stash you tried to apply didn't disappear you can try to examine `git show stash {0}` optionally with `ours` or `theirs` and compare with `git status` and `git diff HEAD`. Your other email account needs to have POP access. If you're not sure check your other email accounts settings menu
