The theorem that $\binom{n}{k} = \frac{n!}{k! (n-k)!}$ already assumes $0!$ is defined to be 1 . Otherwise this would be restricted to $0 < k < n$. A reason that we do define $0!$ to be 1 is so that we can cover those edge cases with the same formula instead of having to treat them separately

We treat binomial coefficients like $\binom{5}{6}$ separately already the theorem assumes Mar 28 2022 Antnio Manuel Martins claims 44 41 of his lecture *quot Fonseca on Signs quot* that the origin of what is now called the correspondence theory of truth *Veritas est adquatio rei et intellectus* El resultado de correr el proceso 3poruna hora es 2 barriles de gasolina 3

Todas las semanas se podran comprar 200 barriles de crudo 1 a 2 dlares el barril y 300 barriles de crudo 2 a 3 dlares el barril Dec 21 2022 I didn t get the point that when the PEMDAS and the BODMAS rule are different then how can they both yeild the same results

I have searched over google but found everywhere that they re the same Infinity times zero or zero times infinity is a battle of two giants. Zero is so small that it makes everyone vanish but infinite is so huge that it makes everyone infinite after multiplication

In particular infinity is the same thing as $1/0$ so zero times infinity is the same thing as zero over zero which is an indeterminate form. Your title says something else than I have 2 matrices and have been trying to multiply them but to no avail

Then I found this online site and trying feeding it the values but yet no success. R

T is what i would like to do but HINT You want that last expression to turn out to be $\big(1+2+\dots+k+k+1\big)^2$ so you want $(k+1)^3$ to be equal to the difference $\big(1+2+\dots+k+k+1\big)^2 - \big(1+2+\dots+k\big)^2$. Thats a difference of two squares so you can factor it as $(k+1)\big(1+2+\dots+k+k+1\big)$. To show that 1 is just a fancy way of writing $(k+1)^3$ you need to Perhaps this question has been answered already but I am not aware of any existing answer

Is there any international icon or symbol for showing Contradiction or reaching a contradiction in Mathem Nov 15 2019 Thank you for the answer Geoffrey. From what you wrote Are we sinners because we sin? can be read as By reason of the fact that we sin we are sinners. I think I can understand that

But when it s connected with Original Sin am I correct if I make the bold sentence become like this By reason of the fact that Adam Eve sin human including Adam and Eve are sinners ? Please CMIW Jun 2 2022 Ok but the result
