Dec 12 2020 I usually checkwebsiteswith different online tools like Sucuri website scanner blacklisting with Virustotal URL check and copy the html code and scan it at virustotal to see if there really is something there of just a false positive Apr 29 2021 Again IMO anti malware software that is intended to protect end users should only blockwebsitesthat contain an actual threat not just theoretical ones Recently defaced website with a malicious javascript alert for external link!Author Topic Recently defaced website with a malicious javascript alert for external link! Read 1057 times Jul 4 2017 No one buidingwebsitesperforms such testing on a regular basis like we do here but one can easily imagine how scripts are being run vulnerable to shellcode attacks and XSS exploits in that case the reason to retire such script versions and retriable script is obvious When you share an Ip address with many maliciouswebsitesyou run the risk of being blocked by a general IP block as might be the case here

Final verdict is up to an Avast Team Member as they can exclude domains from a general IP block

We cannot as we are volunteers with relevant knowledge and expertise so we can only advise It is really disappointed since I have uninstalled and clean out with CCleaner remove registry regarding to Avast and reinstalled Avast Pro 5.0. Problem is still the same

It is weird that I can log on Google Voice but no otherwebsites. Avira is my protector while I am on the internet and Avast SandBox is working fine
