Oct 4 2023 Aortic valve regurgitation also called aortic regurgitation is a type of heart valve disease. The valve between the lower left heart chamber and the body's main artery doesn't close tightly.

As a result, some of the blood pumped out of the heart's main pumping chamber, called the left ventricle, leaks backward. Aortic regurgitation is a leaky aortic valve. This valve controls blood flow between your aorta and your heart's main pumping chamber.

Learn more May 24 2024 What causes aortic regurgitation? Common causes of severe aortic regurgitation are bicuspid valve disease, congenital abnormalities, primary diseases in the ascending aorta or dilated aortic sinuses.

Acute aortic regurgitation can be caused from bacterial infections of the heart tissue after chest trauma or from calcific valve disease. Aortic regurgitation (AR) is also known as aortic insufficiency (AI). It is the leaking of the aortic valve of the heart that causes blood to flow in the reverse direction during ventricular diastole from the aorta into the left ventricle. Feb 27 2024 Aortic regurgitation is a heart valve disease in which the aortic valve does not close tightly.

This allows blood to flow from the aorta, the largest blood vessel, into the left ventricle, a chamber of the heart. Aortic regurgitation or aortic insufficiency is a type of heart valve disease that affects the aortic valve and the flow of blood through it to the heart.

The aortic valve has flaps called cusps or leaflets that control the blood flow through the valve. Aortic regurgitation (AR) is incomplete closure of the aortic valve, causing backflow from the aorta into the left ventricle during diastole.

Causes include valvular degeneration, aortic root dilation, or both, related to underlying bicuspid aortic valve, aortic root dissection, rheumatic fever, endocarditis, myxomatous degeneration, and connective tissue, e.g., Marfan syndrome or rheumatologic. Oct 30 2024 Aortic regurgitation occurs when the leaflets that close the aortic valve do not function properly.
