PUT is used by FB to update the comment because an existing resource is being updated and that is what PUT does. PUT updates a resource. PUT happens to be idempotent in contrast to POST. Mar 24 2014 The difference between POST and PUT is that PUT is idempotent that means calling the same PUT request multiple times will always produce the same result that is no side effect while on the other hand calling a POST request repeatedly may have additional side effects of creating the same resource multiple times. Nov 8 2011 Can I use a PUT method in an HTML form to send data from the form to a server? I m building a RESTful API using Zend Framework via the Zend_Rest_Route

For uploading of files should I use PUT or POST to handle the process? I m trying to be as consistent as possible with the Dec 8 2012 How do I test a RESTful PUT or DELETE method using cURL? Apr 28 2009 I was wondering what people s opinions are of a RESTful PUT operation that returns nothing null in the response body Feb 25 2019 I have few questions that Although it a restful api but specific application which would be used by an angular application So should I return data in response of POST PUT requests

Should I use PATCH in case of Verify or any other action where just record id and version No send to server to change some fields or it is OK to use PUT. Since PUT requests include the entire entity if you issue the same request repeatedly it should always have the same outcome the data you sent is now the entire data of the entity

Therefore PUT is idempotent

Using PUT wrong What happens if you use the above PATCH data in a PUT request? Feb 9 2014 PUT and PATCH methods are similar in nature but there is a key difference. PUT in PUT request the enclosed entity would be considered as the modified version of a resource which residing on server and it would be replaced by this modified entity. Nov 20 2014 I m writing a webservice

Could any one explain these above methods and give me some example about them?
Thank for your help.
