PUTis used by FB to update the comment because an existing resource is being updated and that is whatPUTdoes updates a resource .PUThappens to be idempotent in contrast to POST Mar 24 2014 The difference between POST andPUTis thatPUTis idempotent that means calling the samePUTrequest multiple times will always produce the same result that is no side effect whileonthe other hand calling a POST request repeatedly may have additional side effects of creating the same resource multiple times Nov 8 2011 Can I use aPUTmethod in an HTML form to send data from the form to a server? I m building a RESTful API using Zend Framework via the Zend\_Rest\_Route

For uploading of files should I usePUTor POST to handle the process? I m trying to be as consistent as possible with the Dec 8 2012 How do I test a RESTfulPUT or DELETE method using cURL? Apr 28 2009 I was wondering what people s opinions are of a RESTfulPUToperation that returns nothing null in the response body Feb 25 2019 I have few questions that Although it a restful api but specific application which would be used by an angular application So should I return data in response of POST PUTrequests

Should I use PATCH in case of Verify or anyother action where just recordId and versionNo send to server to change some fields or it is OK to usePUT SincePUTrequests include the entire entity if you issue the same request repeatedly it should always have the same outcome the data you sent is now the entire data of the entity

ThereforePUTis idempotent

UsingPUTwrong What happens if you use the above PATCH data in aPUTrequest? Feb 9 2014 PUTand PATCH methods are similar in nature but there is a key difference.PUT inPUTrequest the enclosed entity would be considered as the modified version of a resource which residingonserver and it would be replaced by this modified entity Nov 20 2014 I m writing a webservice

Could any one explain these above methods and give me some example about them? Thank foryourhelp.
