Jul 22 2019 A formatted string literal or f string is a string literal that is prefixed with f or F. These strings may contain replacement fields which are expressions delimited by curly braces {}

While other string literals always have a constant value formatted strings are really expressions evaluated at run time. Some examples of formatted string L Specifies that a following a A e E f F g or G conversion specifier applies to a long double argument

The same rules specified for fprintf apply for printf sprintf and similar functions f strings are cute and remind me of Ruby syntax

But they don t seem to have a lot of advantages and as you ve said they unnecessarily break compatibility with Python < 3.6 Aug 16 2018 How can I use f string with logic to format an int as a float? I would like if ppl is True to format num to 2 decimal places and if ppl is False to rformat it as whatever it is

Something like st Reddit is a network of communities where people can dive into their interests hobbies and passions. There s a community for whatever you re interested in on Reddit I have a string in which I would like curly brackets but also take advantage of the f strings feature

Is there some syntax that works for this? Here are two ways it does not work. I would like to Dec 3 2012 A few of these don t do anything interesting or even anything visible. I have indicated those which don t do anything visually

F3 + S Force Reload Visually does little lags flickers F3 + T Refresh Textures Visually does little lags flickers Shift + F3 + F Increase Render Distance F3 + F Decrease Render Distance F3 + A Load Renderers essentially reloads all visual Is there an easy way with Python f strings to fix the number of digits after the decimal point? Specifically f strings not other string formatting options like .format or % For example let s s Discussion about Path of Exile a free ARPG made by Grinding Gear Games Instead of using f strings you can use the format method to interpolate dynamically with a very similar syntax

If you want the user to have access to only a small number of specific variables you can do something like You can of course rename the key that the user inputs vs the variable name that you use.
