The river is 1.45 km wide. a At what angle should the boat head? Express your answer in degrees. b What will be the boats speed Point B is located across the river from point A and at a 42.0 angle upstream from A A boat travels from point A to point B sailing at 19

0 km h relative to the water Starting from one shore you row a boat across a narrow river to the other shore. The river is 30.0 m wide

As you row the river current moves your boat down the river a distance of 1.5 m What is the resultant displacement of your boat? Express your answer in components and then determine the magnitude The Grand Canyon and the Colorado River are beautiful rugged and sometimes dangerous

Thomas Myers is a physician at the park clinic in Grand Canyon Village. Dr What evidence suggests that the river is widening the valley through lateral erosion? 3. Natural levees can be seen along the Souris River in the center portion of the map north of Westgaard Cemetery

Approximately how high are the levees in feet? 4. Explain the formation of the 1 In which direction is the Souris River flowing? Business Accounting Accounting questions and answers River president of Miller Custom Coffee Roasters drives a 2022 Mercedes E300 with a fair market value of \$56,500

The lease value is \$14,750. The odometer started at 735 and was reported at 31,335 at the end of the year. The car was available all of 2023

River reported driving 30,600 miles during 2023 of 9 hours ago Problem 1 A solid block in the shape of a cube rests partially submerged on the bottom of a river as shown in Fig. P7.43. The drag F_D on the block depends on the river depth

d the block dimension h the stream velocity V the fluid density ρ and the acceleration of gravity Problem 2 A wastewater treatment plant WWTP discharges treated wastewater to a river. The wastewater effluent characteristics are flow = 1.2 m³ s BOD = 30 mg L and DO = 0.5 mg L

The river characteristics just upstream of the wastewater discharge are flow = 5.1 m³ s BOD = 6 mg L and DO = 8.4 mg L at saturation. Assume the wastewater and river are at the same temperature and $k_d = 0.25 \text{ d}^{-1}$ and The initial ultimate BOD after mixing of the river is 50 mg L

The DO in the river after the wastewater and river have mixed is at saturation The river temperature is 10°C A farmer is to pump water at 70°F from a river to a water storage tank nearby using a 125 ft long 5 in diameter plastic pipe with three flanged 90° smooth bends

The water velocity near the river surface is 6 ft s and the pipe inlet is placed
