Dec 3 2025 MIT researchers developed an aerial microrobot that can fly with speed and agility comparable to real insects

The research opens the door to future bug sized robots that could aid in search and rescue missions The word robot was coined by the Czech writer Karel apek in a 1920 play called Rossums Universal Robots and is derived from the Czech robota meaning drudgery or servitude Jul 24 2025 A vision based control system called Neural Jacobian Fields enables soft and rigid robots to learn self supervised motion control using only a monocular camera

The system developed by MIT CSAIL researchers combines 3D scene reconstruction with embodied representation and closed loop control Apr 9 2025 A hopping insect sizedrobotcan jump over gaps or obstacles traverse rough slippery or slanted surfaces and perform aerial acrobatic maneuvers while using a fraction of the energy required for flying microbots Jun 5 2025 A new system enables arobotto think ahead and consider thousands of potential motion plans simultaneously allowing therobotto solve a multistep problem in a few seconds Dec 19 2025 Robot know thyself New vision based system teaches machines to understand their bodies Neural Jacobian Fields developed by MIT CSAIL researchers can learn to control anyrobotfrom a single camera without any other sensors Dec 16 2025 A generative AI driven system enables non experts to design and build common objects like furniture simply by describing the objects with words Jul 17 2025 A new training interface allows arobotto learn a task in several different ways

This increased training flexibility could help more people interact with and teach robots and may also enable robots to learn a wider set of skills Apr 24 2025 MIT roboticists developed a way to cut through data noise and help robots focus on the features in a scene that are most relevant for assisting humans

The system could be used in smart manufacturing and warehouse settings where robots would work alongside and assist humans Jan 28 2025 MIT Associate Professor Luca Carlone works to give robots a more human like perception of their environment so they can interact with people safely and seamlessly.
