Myxofibrosarcoma MFS is a rare soft tissue sarcoma type with high local recurrence and amputationrates. Robust epidemiological data on overall survivalof patients with MFS and prognostic factors are lacking due to the rareness of the disease

In Stage Grade What is the survivalrateformyxofibrosarcoma? The five year overall survivalrateformyxofibrosarcomais 67%. This means that 6 to 7 out of 10 people diagnosed with MFS are alive five years later

Its important to remember that survivalrates dont tell the whole story about a diagnosis Myxofibrosarcomaprognostic factors outcomesurvivalSoft tissue sarcoma is a rare disease with an annual incidence of approximately 2.5 per 100 000 per year 1

Divided into approximately 50 histological subtypes it represents a very heterogenic group of tumour entities

Therefore the treatment for soft tissue sarcoma varies from primary surgical resection to neoadjuvant adjuvant cytotoxic May 28 2024 Myxofibrosarcomais known for its potential for late recurrences so future studies with longer follow up periods would be beneficial to better understand the long term outcomes and survivalrates Survivalratesand statistics are critical in understandingmyxofibrosarcomaprognosis

They offer insights into what patients might expect in terms of outcomes based on various factors including tumor characteristics and treatment protocols Jun 1 2024 We evaluated LC patterns of recurrence and survivalratesin patients with MFS treated with neoadjuvant RT followed by definitive surgery

Potential prognostic factors including tumor histology size role of inadvertent excision IE and location were assessed Feb 22 2022 Myxofibrosarcoma MFS is a rare soft tissue sarcoma type with high local recurrence and amputationrates

Robust epidemiological data on overall survivalof patients with MFS and prognostic factors are lacking due to the rareness of the disease

In this study we therefore report prognostic factors and real life outcomes of the largestmyxofibrosarcomacohort to date including 908 patients The primary outcome measures for this analysis wereratesof OS local recurrence freesurvival LRFS and distant recurrence freesurvival DRFS

Dates of death for patients with Social Security numbers were obtained from the Social Security Death Index SSDI.
