Jul 19 2024 Ductal carcinoma in situ is a very early form of breast cancer. In ductal carcinoma in situ, the cancer cells are confined inside a milk duct in the breast. The cancer cells haven't spread into the breast tissue. Ductal carcinoma in situ is often shortened to DCIS.

It is sometimes called noninvasive preinvasive or stage 0 breast cancer. Invasive ductal carcinoma (IDC) is the most common type of breast cancer, accounting for approximately 80% of cases.

The tumor originates in the cells that line a breast duct, which carries milk from a milk-producing gland (lobule) to the nipple.

After breaking through the wall of the duct, the cancerous cells may invade other breast tissues or nearby lymph nodes. Apr 11 2025 Invasive ductal carcinoma is breast cancer that starts in the breast ducts and has spread to surrounding tissue.
